## Heating and Cooling Control

### Using Heating and Cooling Control

#### ① Control Output Assignment

If there is no control output 2, an auxiliary output is used as the cooling control output.

If there is a control output 2, the two control outputs are used for heating and cooling.

(It does not matter which output is used for heating and which output is used for cooling.)

#### ② Control

If PID control is used, you can set PID control separately for heating and cooling.

This allows you to handle control systems with different heating and cooling response characteristics.

## External Connections

### E5CC (Screw Terminal Blocks)

**Note:** 1. The application of the terminals depends on the model.

2. Do not wire the terminals that are shown with a gray background.

3. When complying with EMC standards, the cable that connects the sensor must be 30 m or less.  
If the cable length exceeds 30 m, compliance with EMC standards will not be possible.

4. Connect M3 crimped terminals.

5. Due to UL Listing requirements, use the E54-CT1L or E54-CT3L Current Transformer with the factory wiring (internal wiring).  
Use a UL category XOBA or XOBA7 current transformer that is UL Listed for field wiring (external wiring) and not the factory wiring (internal wiring).

Terminal type

The E5CC is set for a K-type thermocouple (input type = 5) by default. An input error (5ERR) will occur if the input type setting does not agree with the temperature sensor. Check the input type.

Use no-voltage inputs for the event inputs.  
 The polarity for non-contact inputs is given in parentheses.

- Note:**
- The application of the terminals depends on the model.
  - Do not wire the terminals that are shown with a gray background.
  - When complying with EMC standards, the cable that connects the sensor must be 30 m or less. If the cable length exceeds 30 m, compliance with EMC standards will not be possible.
  - Refer to *Wiring Precautions for E5□C-B (Controllers with Push-In Plus Terminal Blocks)* on page 133 for wire specifications and wiring methods.
  - Common terminals are indicated with asterisks (\*). You can use the input power supply and communications common terminals for crossover wiring. Do not exceed the maximum number of Temperature Controllers given below if you use crossover wiring for the input power supply.  
 100 to 240 VAC Controllers: 16 max.  
 24 VAC/VDC Controllers: 8 max.

- Due to UL Listing requirements, use the E54-CT1L or E54-CT3L Current Transformer with the factory wiring (internal wiring). Use a UL category XOBA or XOBA7 current transformer that is UL Listed for field wiring (external wiring) and not the factory wiring (internal wiring).
