

PREFABRICATED ROUND CABLES WITH RJ45 CONNECTOR

Features

- Prefabricated cables with RJ45 connector consists of a length of cable with a male modular plug crimped to each end of the cable. The RJ45 plugs have 8 flat conductor contacts placed parallel to the connector body to reduce assembly time and improve termination quality in the field.
- RJ45 is a type of communication protocol that is used for Ethernet and other long distance communications. In this type of communication, Data is transmitted between two electronics devices like Microcontrollers or Microprocessors over a very long distance without getting it lost.

Specifications

- Shielded/ non shielded cable assembly is available.
- Available in all customize lengths.
- Shielded/Non Shielded cable assembled with Rj45 connectors at both ends.
